## EXPERIENCE

### AI Engineer and Project Lead

Apr. – Aug. 2026

SELARL Ophtao, ophthalmology practice

Houilles, France

- **Software in daily use.** Built and shipped ophtao.fr and its private staff area, live and used every day by the practice, in PHP and SQLite.
  - login and permissions, weekly hours accounting, four export formats
  - an editor that lets the secretariat correct the public pages from the browser, with a fingerprint check that refuses to write if a colleague edited the file in the meantime
- **Agent-style automation in an enterprise setting.** Five modules that automate what the staff used to do by hand, deployed across the practice's seven workstations.
  - upload to France's national health record, routing of imaging output into patient records, two-way medical device integration
  - a bridge built on top of a closed **Microsoft Access** application that had no API, rather than against an undocumented database schema
  - each workstation configured from a single JSON file, with a written roadmap per machine and a decision log
- **RAG assistant with a human in the loop.** Designed and built a chatbot answering patient questions from an ophthalmology document base, with a prompt engineering path for administrative questions.
  - chunking, a **DrBERT** embedding service for French medical text, a generation service, and a **FastAPI** orchestration layer, all in containers
  - runs on the practice's own machines, because sending medical data to a remote API would have required a legal basis and a contract
  - evaluated on a replayed question set, by inspecting which passages were actually retrieved, and by clinician review. Not deployed, for logistical reasons
- **Technical direction.** The practice's IT team was two Master's interns from ESIEA and myself.

### LLM Engineer, final internship

Jan. – Jun. 2025

French Digital Health Agency · Inria · Inserm

PariSanté Campus, Paris, France

- **Evaluation at scale.** Translating SNOMED CT into French and Spanish, **350,000 medical concepts**, without losing a taxonomy that experts had built over decades.
  - seven example-retrieval strategies compared against each other, with random and fixed-example controls, on reference sets of valid and invalid translations
  - the knowledge graph guarantees perfect domain proximity and still loses against embeddings. I kept that result ([🔗 experiments](#))

### Prompt Engineer, internship

Jul. – Aug. 2024

Lariboisière Hospital (AP-HP), anaesthesiology dept.

Paris, France

- **Structured extraction from free text.** Data needed for clinical research existed only as unstructured notes.
  - extraction of terms and values into structured tables with an LLM, and de-identification of the records before any processing ([🔗 code](#))

## PROJECTS

### job-hunt-kr [Python](#) · [SQLite](#) · [Anthropic API](#)

A job-watching pipeline where the human keeps the send button.

- a cascade, a local model filters the volume for free and the remote API only sees what is left
- no scraping, it reads my own mailbox over IMAP, so no terms of service are broken
- it writes a draft and stops there

### Computational linguistics portfolio [🔗 Python](#) · [in progress](#)

Six repositories rebuilding the foundations of the NLP field from scratch and measuring each step.

### Agent Engineer, French translation [🔗 open source](#)

Full French translation of a course on agent engineering, **19 chapters**, covering function calling, agent design patterns, evaluation, guardrails and the **MCP** and **A2A** protocols.

## SKILLS

### Agents and LLMs

Tool calling, Agent design patterns, MCP, A2A, Prompt engineering, In-context learning, LangChain, LlamaIndex, LangGraph at prototype level

### Retrieval

RAG, Chunking, Embeddings, FAISS, TF-IDF, BM25, LSA, Reranking, Context construction

### Evaluation and feedback

Test set design, Recall@k, MRR, MAP, Controlled comparison of strategies, Human review by domain experts

### Production engineering

Python, FastAPI, Docker, REST, Microservices, pytest, Git, SQLite, JavaScript, PHP

### Regulated domains

Medical data, GDPR, De-identification, National interoperability certification, On-premises constraints

### ML and NLP

PyTorch, HuggingFace, spaCy, Pandas, Transformer architecture, Tokenization, LoRA, Knowledge graphs

## EDUCATION

### M.Sc. Computational Linguistics

Université Paris Cité

2021–2025

Artificial Intelligence and Natural Language Processing

### B.A. Philosophy

Logic and philosophy of science

Panthéon-Sorbonne

2018–2020

Formal logic, Epistemology, History of science, Anthropology, Sociology

## TRAINING COURSE

### SNOMED CT Foundation Course

SNOMED International

### AI4Health Summer School

PR[AI]RIE-PSAI

### Semantic Web and Linked Data

Inria/FUN

## LANGUAGES

**French**, native

**English**, professional working proficiency

Master's degree taught entirely in English

**Korean**, beginner, currently learning

## REFERENCE

### Adrien Coulet

Research Scientist, Inria and Université de Lorraine

adrien.coulet@inria.fr
